

## PACKAGES

### Basic package

Basic package contains the onboard unit, wiring, antennas and NB-IoT SIM card. The package is a basic setup for your mobile home with the CaraControl system. The contents and functions of the package are furthermore defined by "package content". For remote control via the data network, it is necessary to purchase the tariff plan of the prepaid service after installation in the Services section.

### Security package

The security package includes the onboard unit, wiring, antennas, NB-IoT SIM card, external siren, 3 pieces of wireless intrusion sensors and a Keyless Go card. This package is an extension of equipment for your caravan or motorhome including the basic security. "Package contents" further define the contents and functions of this package. For remote control via the data network, it is necessary to purchase the tariff plan of the prepaid service after installation in the Services section.

## SECURITY

### Keyless Go card with security mode button

This card offers automatic and manual switching of security profiles and Welcome Home function turns on your awning light automatically upon your approach to the vicinity of your vehicle.

### Wireless security sensor for windows and doors

Wireless security sensors with encrypted communication will send you a warning message or a notification in case of intrusion.

### External siren

Loud siren will discourage any thief in the case of intrusion.

## GAS MEASUREMENT

### Wireless gas measuring pad

Easy-to-install wireless shock resistant scale with tilt and temperature sensors and gas leak detection offers a wide selection of measurable cylinders, including composites. This novelty is capable of measuring the filling volume of up to two bottles simultaneously with 3% accuracy of up to 6° tilt.

## WIRING

### Power wiring

Basic wiring for connecting the CaraControl onboard unit. It includes power leads, output for waste water tank heating, output for water pump control, output for ventilator (air exchanger) and output for siren.

### I/O wiring

This wiring includes 4 outputs for auxiliary heating, 2 outputs for electric lock, 1 input for the ignition, 1 electricity input (230V) and 1 car battery input.

### Heating comm. cable Alde 5m

This wiring connects to your Alde heating to give you control over its functions.

### Heating comm. cable Alde 10m

This wiring connects to your Alde heating to give you control over its functions. This cable is compatible with 3010 - 613 and 3020 - 113 / 013 control panels only!

### Heating comm. Cable Truma 5m

This wiring connects to your Truma heating to give you control over its functions. Requires CP Plus iNet Ready panel.

### Heating comm. Cable Truma 10m

This wiring connects to your Truma heating to give you control over its functions. Requires CP Plus iNet Ready panel.

### Electroblock cable Nordelettronica NE 196-T / NE266 + NE237

This wiring connects to Nordelettronica electroblocks to allow you control over its functions.

### Power supply cable Schaudt CSV Lumberg 8p

This wiring enables control over Schaudt power supply. Simply connect it between a power supply and panel.

### Power supply cable Schaudt EBL Lumberg 10p

This wiring enables control over Schaudt power supply. Simply connect it between a power supply and panel.

### Power supply cable Schaudt EBL Lumberg 12p

This wiring enables control over Schaudt power supply. Simply connect it between a power supply and panel.

### Alarm inputs/lighting switch wiring

This wiring allows the connection of four separate alarm outputs according to the type of alarm. It also scans the main 12V power supply switch and up to 5 lighting switches.

### Lighting control wiring 6A

Facilitates controlling possibilities of 5 light circuits up to 6 Amps of current per channel. One channel is reserved for awning light.

**Lighting control wiring 3A**

Extend your controlling possibilities by 5 additional light circuits with up to 3 Amps of current per channel.

**Wiring for waste water level measurement for Schaudt panels 5m**

This wiring connects between the probes and panel to obtain the level of waste water in the waste tank.

**Wiring for waste water level measurement for Schaudt panels 10m**

This wiring connects between the probes and panel to obtain the level of waste water in the tank.

**Wiring for fresh water level measurement for Schaudt panels 5m**

This wiring connects between the probes and panel to obtain the level of fresh water in the tank.

**Wiring for fresh water level measurement for Schaudt panels 10m**

This wiring connects between the probes and panel to obtain the level of fresh water in the tank.

**Power supply cable Schaudt EBL AMP 12p (30/99)**

This wiring enables control over Schaudt power supply. Simply connect it between a power supply and panel.

**Power supply cable CBE DS300 + PC1xx/2xx/3xx 16p**

This wiring enables control over CBE power supply. Simply connect it between a power supply and panel.

**Universal power supply switch**

This wiring is meant to be used when you do not own any of the supported electroblocks. It offers switching current of up to 10 Amps which can be increased by an external relay based on your requirements.

## ACCESSORIES

**CaraControl onboard unit (spare part)**

Onboard unit connects your external devices with CaraControl system.

**Temperature sensor 2m**

This sensor measures the outer temperature and the values are displayed in CaraControl application.

**Self-adhesive GNSS antenna**

This antenna connected to CaraControl unit v3 allows you to request your vehicle's location and display it on the map.

#### Self-adhesive LPWA antenna

This antenna facilitates the distribution of GSM/LPWA network.

#### Infrared A/C remote control

Control your aircondition unit anywhere you are. You can either cool or heat your living area, depending on the brand and model of your device. Consult a table of supported devices to learn more.

#### ISM antenna 0-90° SMA

This antenna facilitates the distribution of ISM network between our accessories.

## SERVICES

#### Premium multi-bearer services for 1 year

By purchasing this service, inserted NB-IoT SIM card will allow you to control CaraControl unit remotely via terrestrial networks across the World. See our current coverage here: <https://www.caracontrol.eu/page/iot-136>
